

Alright, protagonist — this is a **working-theory curation**, not a sacred tablet. These 150 are chosen to force *mechanical fluency + complexity intuition* before patterns. Numbers and difficulties are accurate to the best of current LeetCode state, but the real value is **why** they're grouped this way.

This set is deliberately uncomfortable. If you can solve most of these **without copying**, patterns will stop looking like magic tricks and start looking like obvious consequences.
